

PRESS RELEASE

SEAWIND OCEAN TECHNOLOGY AND blueOASIS ANNOUNCE COLLABORATION FOCUSING ON SEAWIND'S FORTHCOMING FLOATING OFFSHORE WIND ACTIVITIES IN PORTUGAL

Amsterdam, 22 April 2022

Seawind Ocean Technology (Seawind) is delighted to announce its partnership with Blue Ocean Sustainable Solutions (blueOASIS), a leading Portuguese R&D and technical consultancy firm company in the field of oceans sustainability. blueOASIS will act as the project engineering and permit-technical office for Seawind's projects in Portugal.

Portugal is one of the leading regions in Europe developing new floating offshore wind ('FOW') energy solutions. In this context, Seawind is planning to actively expand its activity off the Portuguese coastline putting forward a FOW demonstration project and later expanding it into a commercial activity.

blueOASIS' expertise, analytical capabilities and sustainability-minded contribution will be key to the success of both of Seawind's ambitious, yet very promising FOW projects.

Vincent Dewulf, CEO of Seawind Ocean Technology, said "blueOASIS is an ideal partner for Seawind in Portugal. They combine experience, local connections and in-depth knowledge of the energy and the oceans domains. Their 'Making the World Green and the Oceans Blue' philosophy is the right one for us. We are very pleased to join forces to deliver on the great floating offshore wind potential of Portugal by accelerating Seawind's unique technology development".

Guilherme Beleza Vaz, blueOASIS CEO, said "our company focuses on sustainable ocean solutions. Seawind fits exactly our focus. We look forward to combining Seawind's disruptive technology with our blue economy and local market knowledge, and technical skills, to support the development of large-scale floating wind projects in Portugal".

Seawind Ocean Technology is a turn-key supplier of integrated floating offshore wind turbine systems. blueOASIS is an R&D and technical consultancy company focusing on sustainability and the blue economy.
